2,389

Projects on Jaipur's RERA register, 2017 to 2026.

They declare **328,469** units. The register is public, and so is each project's own detail page — its recorded status, its extension history, the units it declares, and the pincode the portal records for it. This deck reads those and puts them by pincode.

328,469 units declared

2,387 with a pincode

460 with an extension

Source: the Rajasthan RERA portal's public project register and each project's own detail page. A project's pincode is the value the portal records for it; a pincode is a postal delivery area, not a municipal or revenue boundary.

Where these figures come from

The register

The Rajasthan RERA portal's public **project register** — every Jaipur project and its registration year. **2,389** projects, **328,469** units declared.

The detail pages

Each project's own page carries what the register does not: the recorded **status**, the **extension history**, the units it declares, and its **pincode**. Status and extensions are read per project, not from a summary.

The pincode

The pincode is **the value the portal records for the project**. **2,387** of Jaipur's 2,389 projects carry one; **2** do not.

What a pincode is

A pincode is a **postal geography** — a delivery area — rather than a municipal or revenue boundary, and one pincode may cover places that are otherwise administered separately.

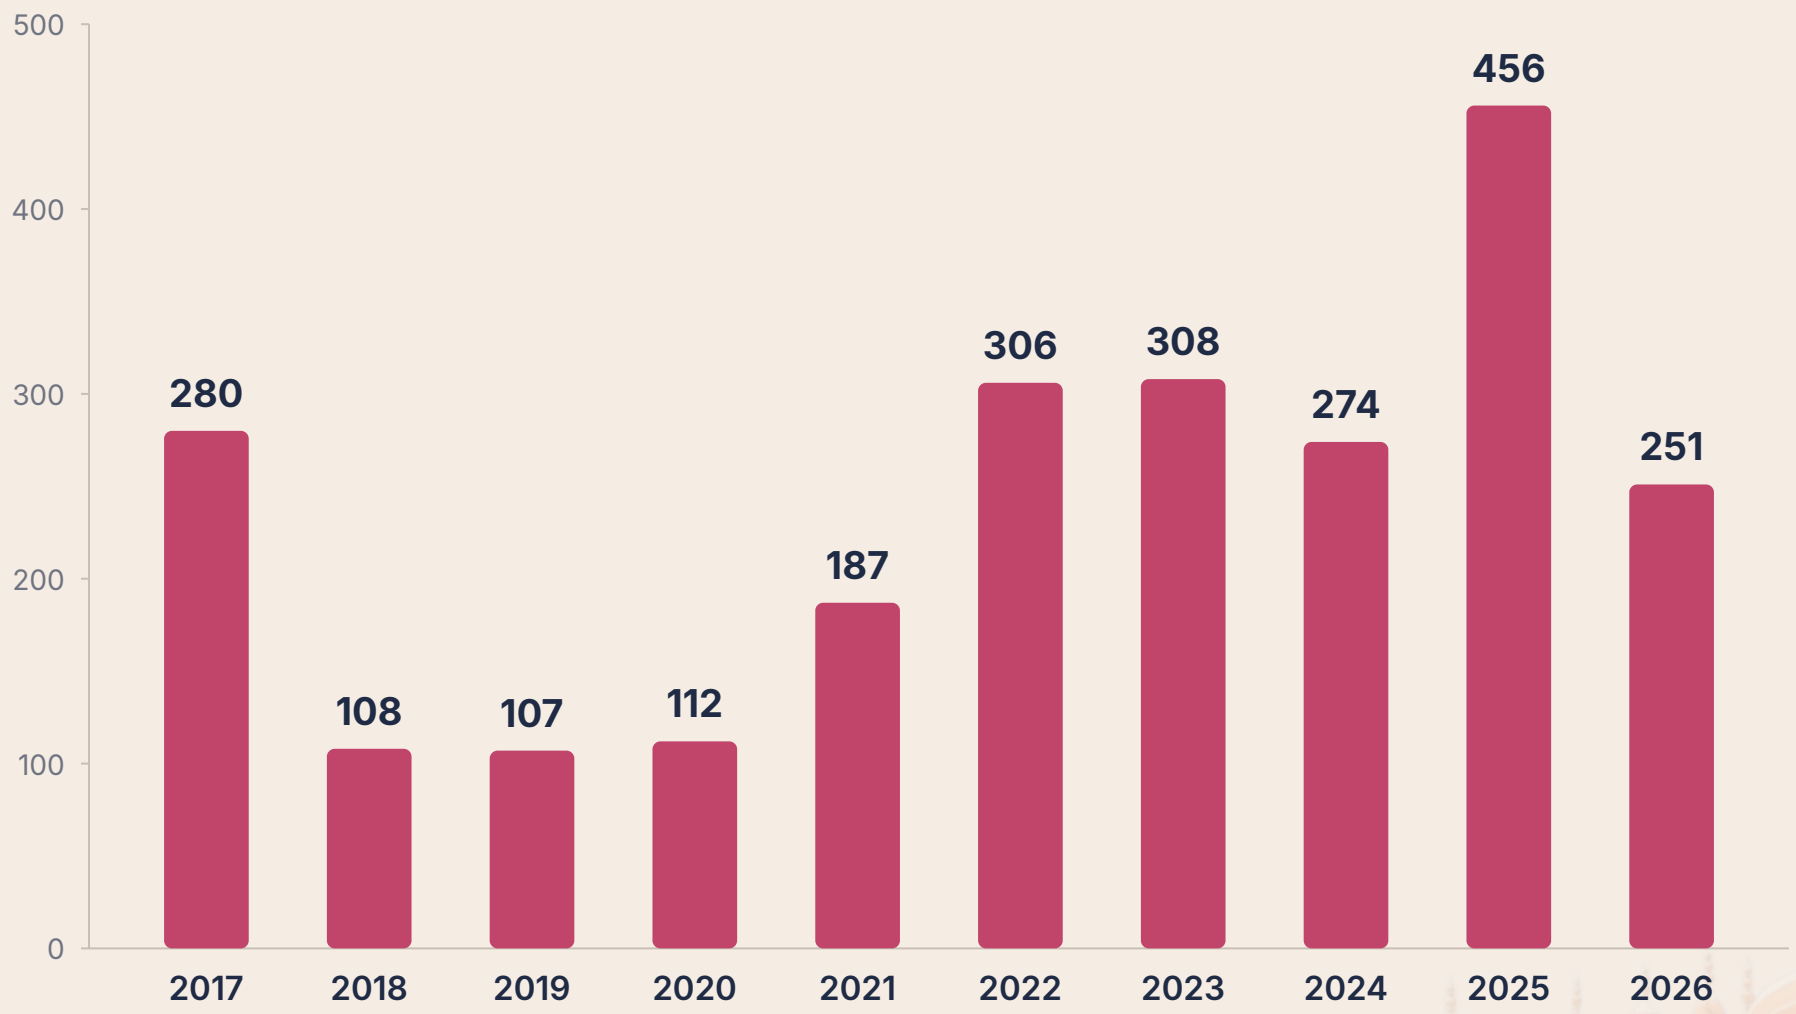

THREE THINGS TO STATE PLAINLY

One. Pincodes in Jaipur fall in the **302xxx and 303xxx** ranges; **5** projects carry a pincode outside those ranges. **Two.** The pincode table has **89 rows** — **88** pincode values plus one row for the projects with no pincode. **Three.** A project's pincode is where the portal records it, and a postal area can span more than one locality.

Every figure was recomputed from the tables before use: **58 of 58** reproduced exactly, with none in disagreement. Four independent groupings — by year, by type, by status and by pincode — each account for the same **2,389** projects and the same **328,469** units, and the fifteen named pincodes plus the aggregated row reconcile to the whole table in every column.

Ten years of registrations, year by year

The register runs from **280** projects in 2017 to **456** in 2025, with **251** so far in 2026.

Jaipur project registrations by year on the RERA portal. 2026 is a partial year. No other year is marked, and none is compared against another.

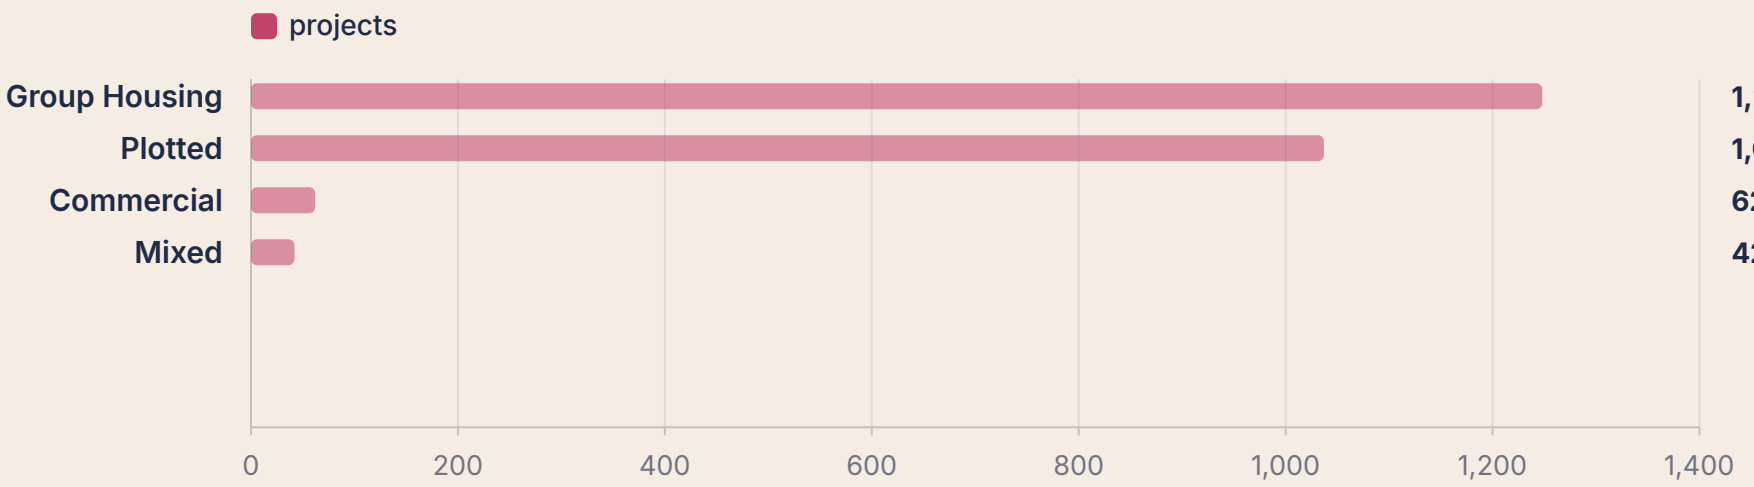

280
registered in 2017, the first year on the register

456
registered in 2025

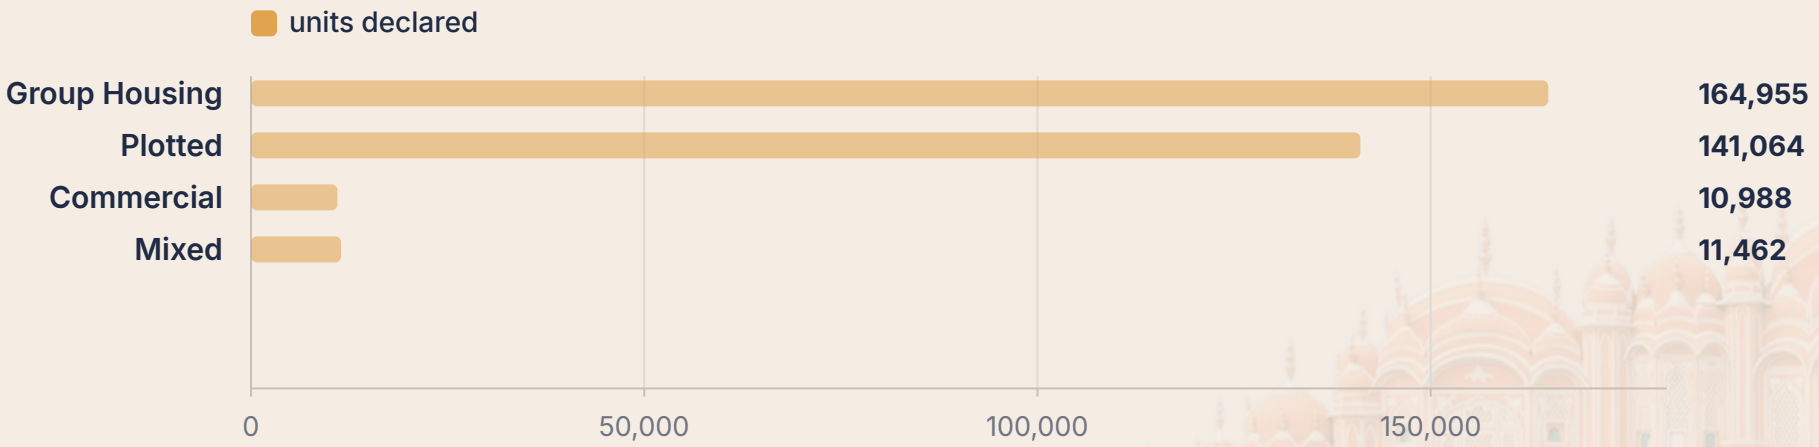

251
registered in 2026, a partial year

Two types fill the register

Group Housing (**1,248**) and Plotted (**1,037**) are the bulk of it; Commercial (**62**) and Mixed (**42**) make up the remainder. The units each type declares are charted below the project counts.

Registrations by project type, on the portal's own type names.

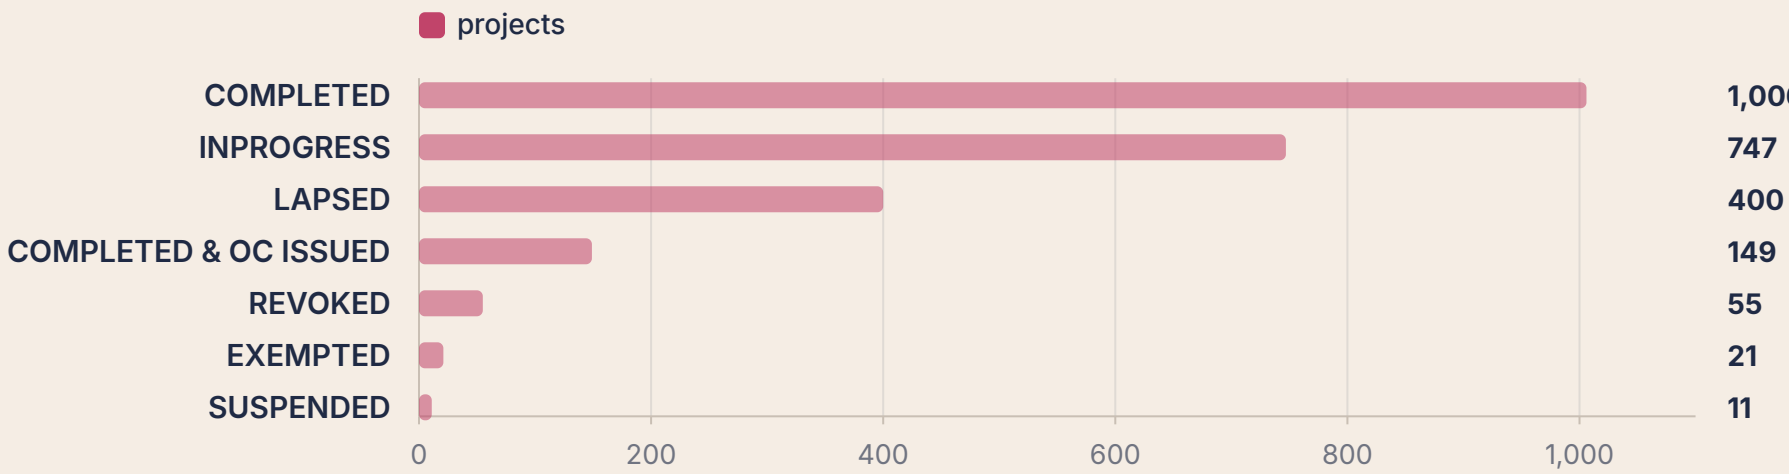

Units declared by each type. The pack carries no per-project unit column, so these are the totals the brief states, not a figure re-added from rows.

Declared units: Group Housing **164,955** · Plotted **141,064** · Mixed **11,462** · Commercial **10,988** — **328,469** in all, a median of 68 units per project.

1,155 projects are recorded as completed

That is **COMPLETED** (1,006) plus **COMPLETED & OC ISSUED** (149) — together **1,155** of 2,389 projects, or **48%**. A further **747** are recorded in progress, and **400** lapsed.

The status the portal records for each project. Completed includes the separate COMPLETED & OC ISSUED group: 1,155 of 2,389 projects, or 48%.

1,006
recorded COMPLETED

149
COMPLETED & OC ISSUED

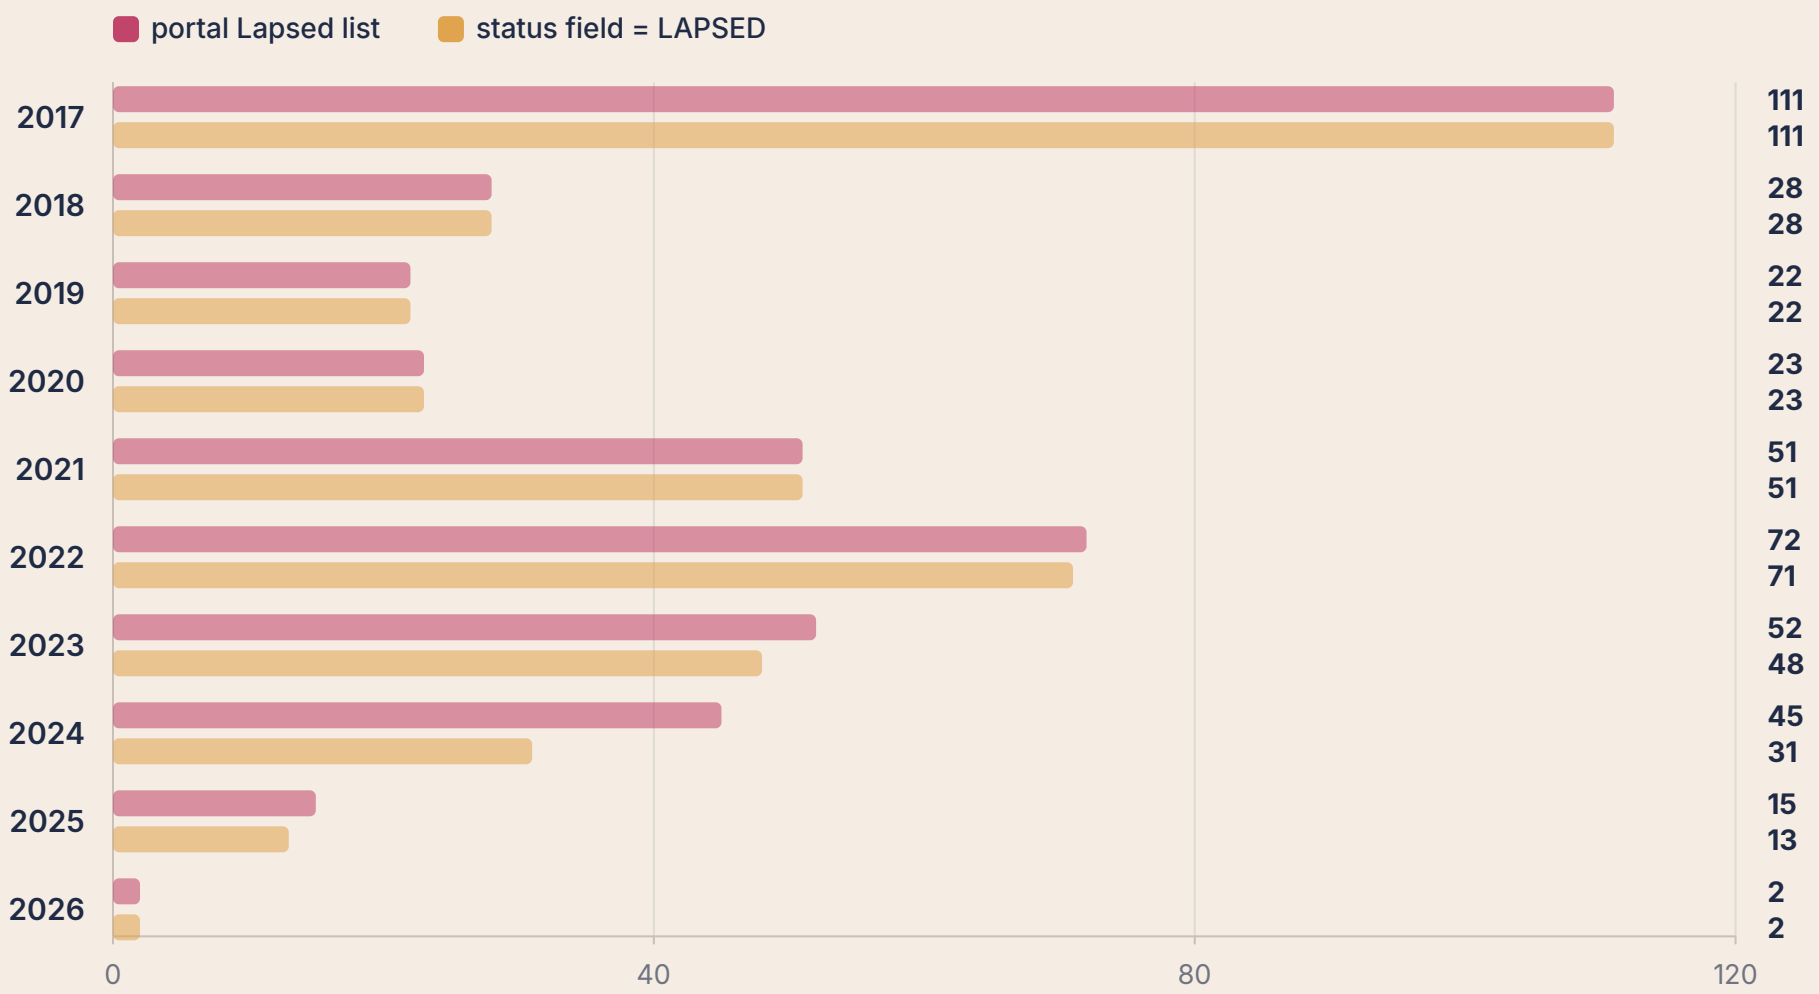

747
recorded INPROGRESS

400
recorded LAPSED

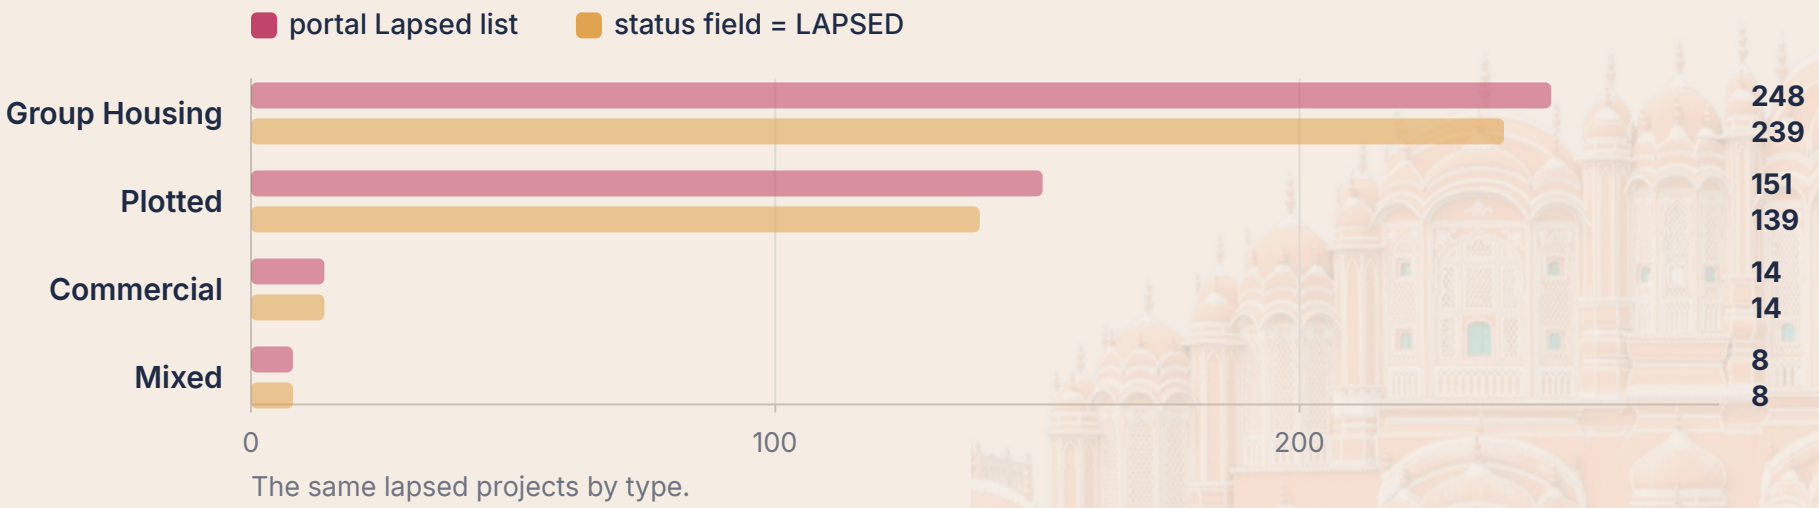

The remaining recorded statuses are REVOKED (**55**), EXEMPTED (**21**) and SUSPENDED (**11**). These are the portal's own recorded values, reported as recorded.

421 projects sit on the portal's Lapsed list

Counted from the recorded status instead, **400** projects are **LAPSED**. The portal publishes both, and they are close: the difference is 21 projects. Both counts are charted by year and by type.

Lapsed projects by registration year, counted two ways. The two agree in most years; 421 against 400 across the whole register.

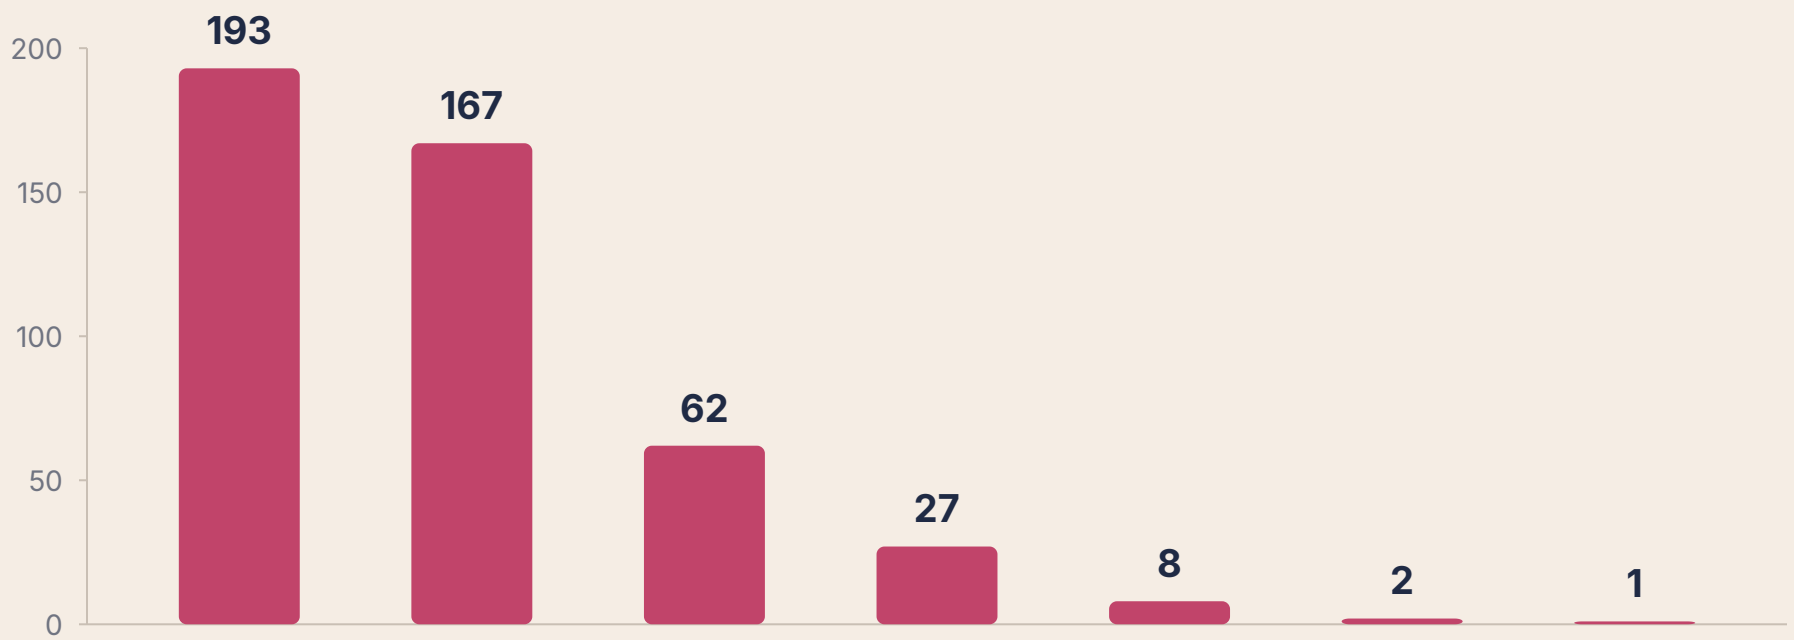

The same lapsed projects by type.

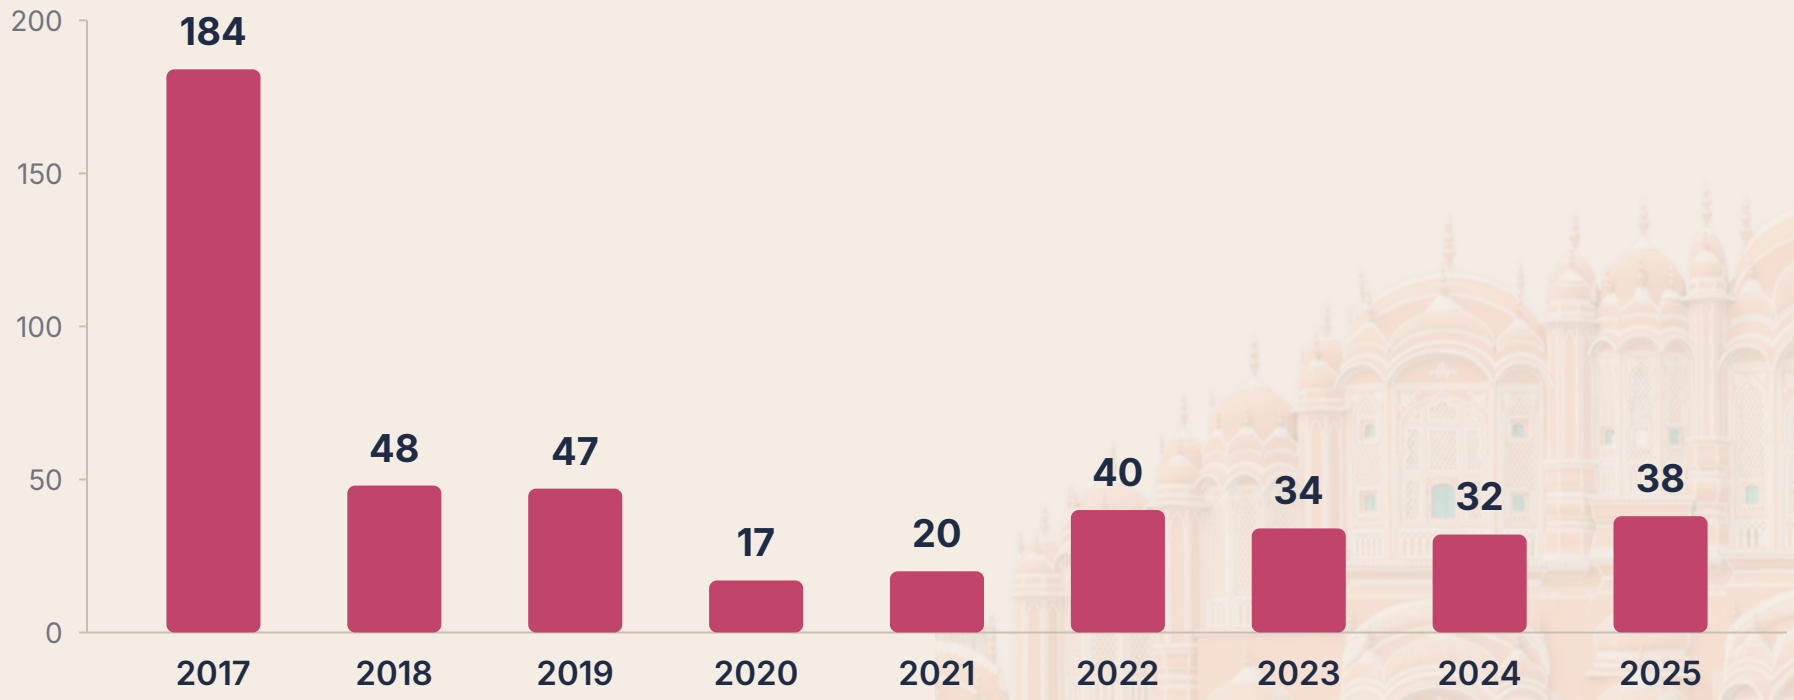

By type, the portal's list gives Group Housing **248**, Plotted **151**, Commercial **14** and Mixed **8**.

460 projects hold at least one extension

That is **19.3%** of the register. Between them they hold **880** extension records, of which **872** carry usable dates. **193** projects hold exactly one record and **167** hold two. The median record runs **364 days**; the median extended project gains **474 days** across all of its extensions, and the longest single grant is **3,690 days**.

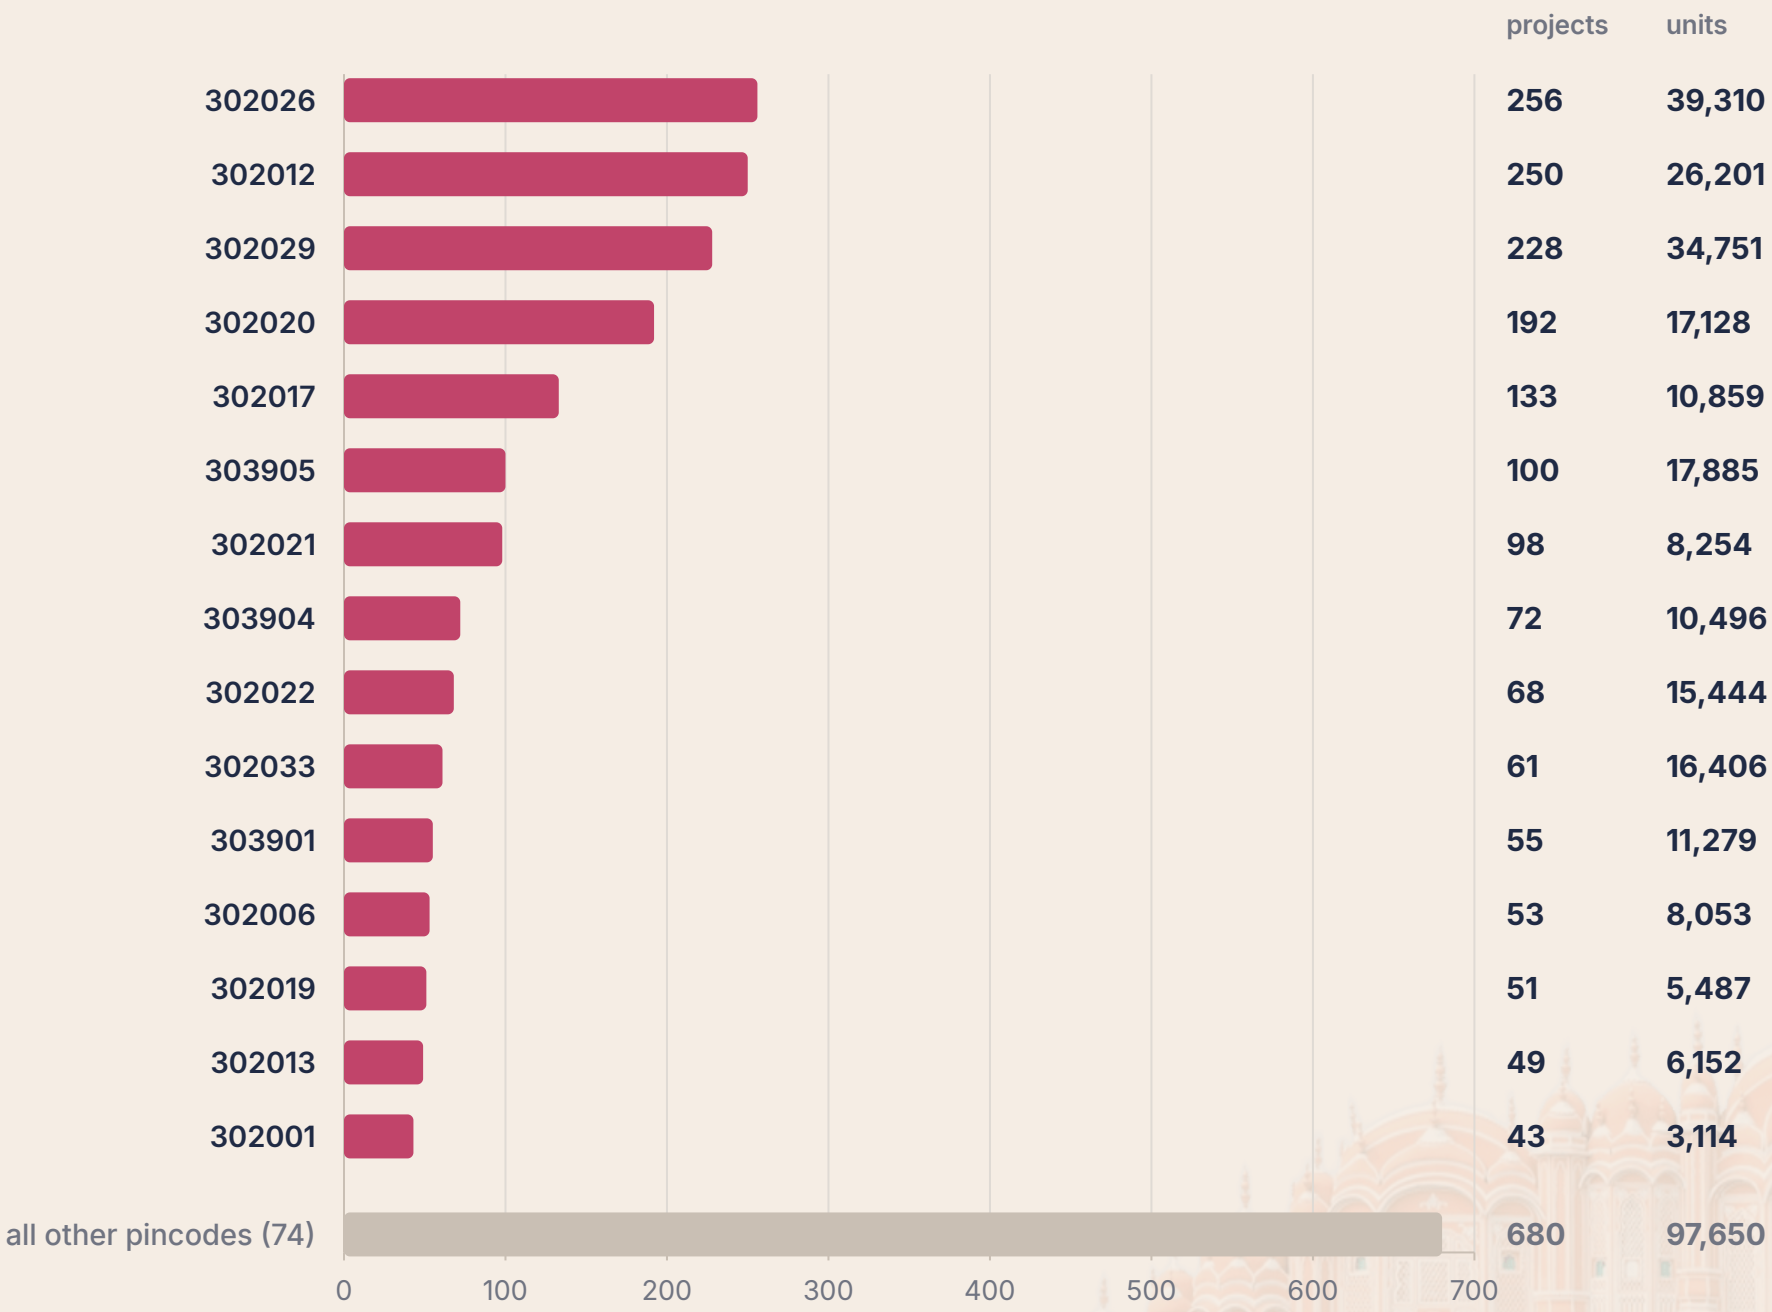

How many extension records each extended project holds. The counts of projects are the pack's; the record total is the sum of this table.

Extended projects by their year of registration. The table runs 2017 to 2025 and has no 2026 row.

Where the projects are, by pincode

The fifteen pincodes with the most projects, then the remaining 74 added together. **302026** leads with **256** projects and **39,310** units; the aggregated row holds **680** projects across those 74 pincodes.

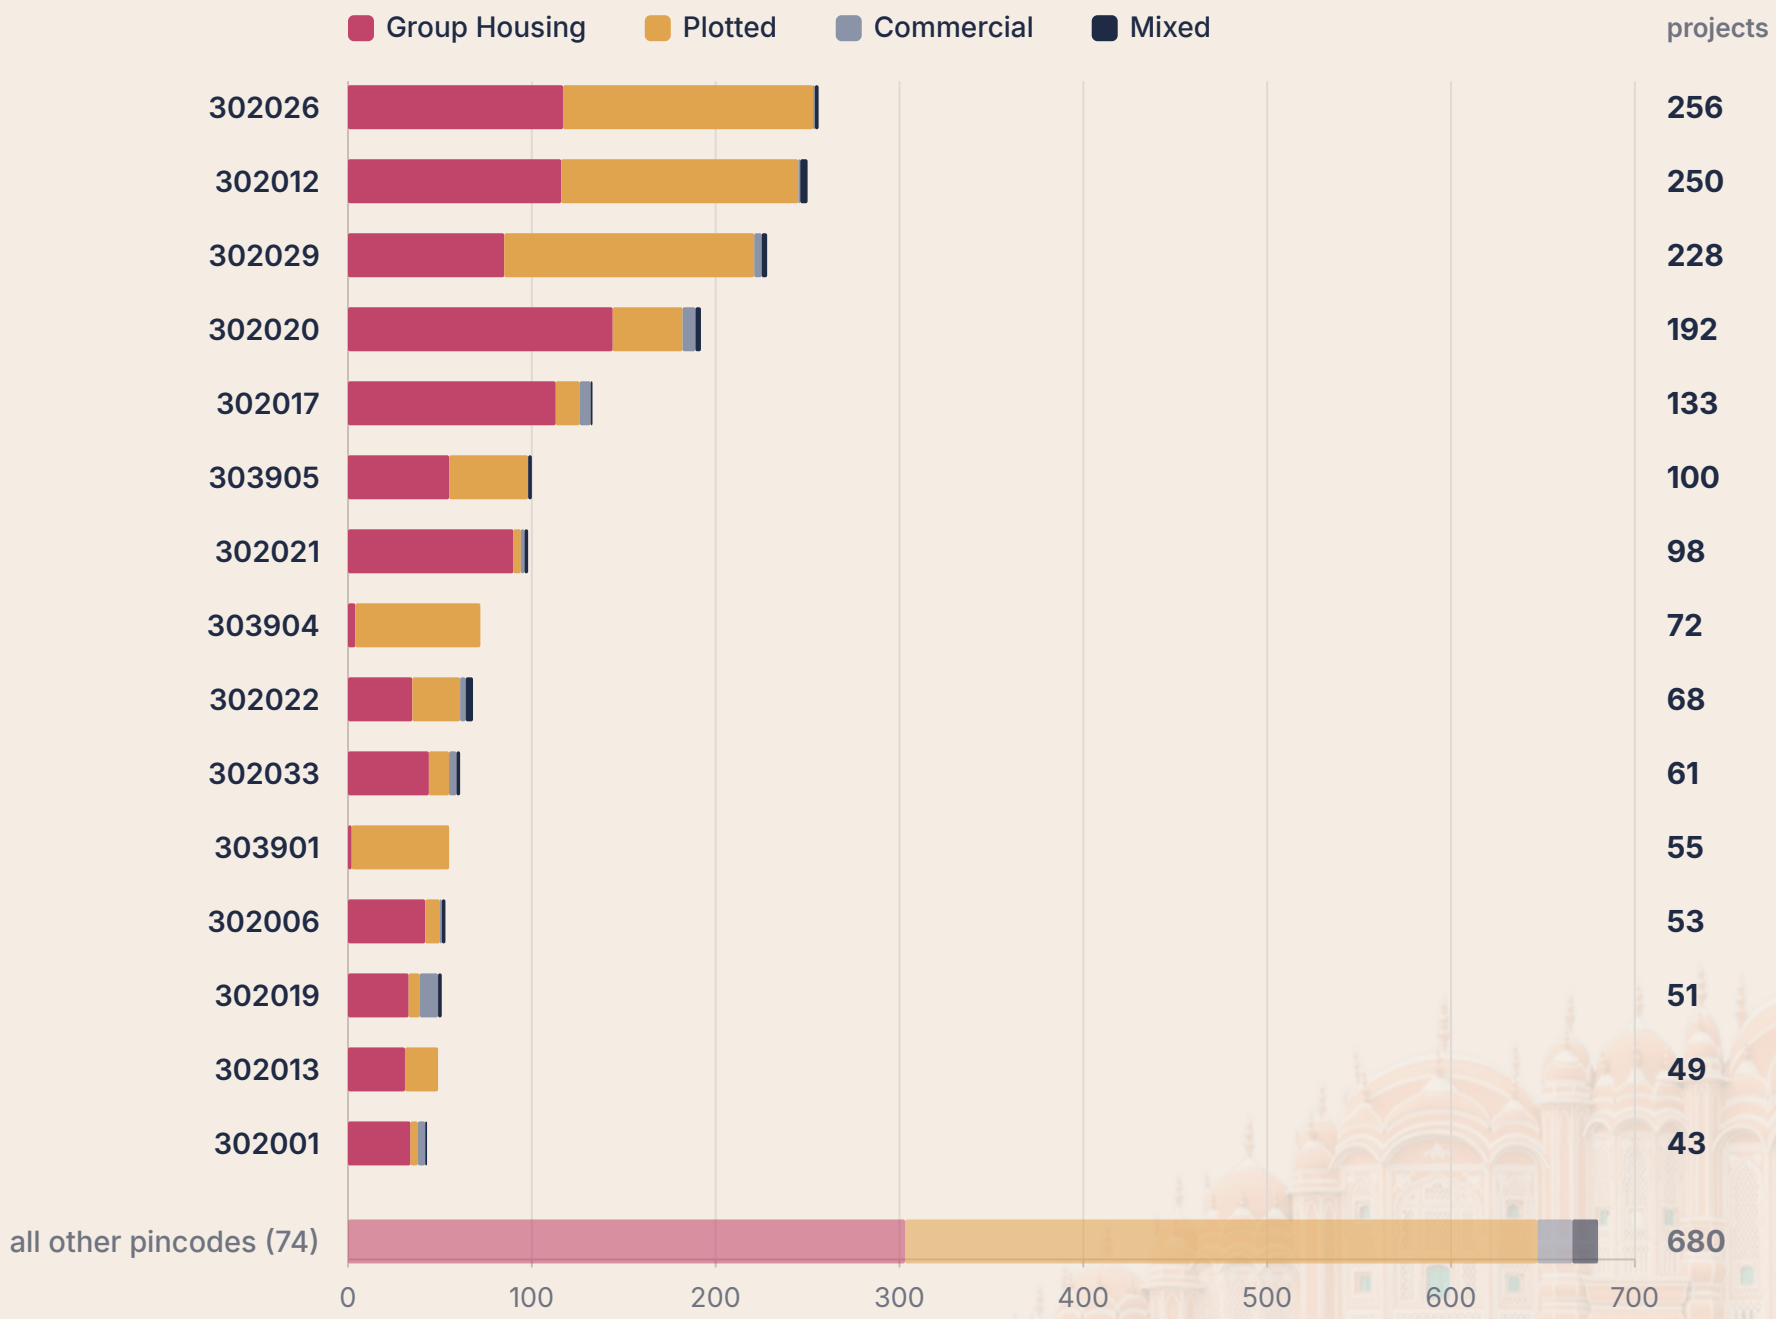

Projects and units by pincode — the fifteen pincodes with the most projects, then the remaining 74 pincodes added together.

The top ten pincodes hold **61%** of the projects. **6** pincodes hold 100 or more projects, **13** hold 50 or more, and **53** hold fewer than ten — **155** projects between them. The median pincode holds **7**.

What kind of project each pincode holds

Each bar is a pincode's projects split by type, nose to tail from zero; the figure at the right of each row is that row's total projects. The legend names the four types. The rows are the same fifteen pincodes as the previous slide, in the same order, then the remaining 74 added together.

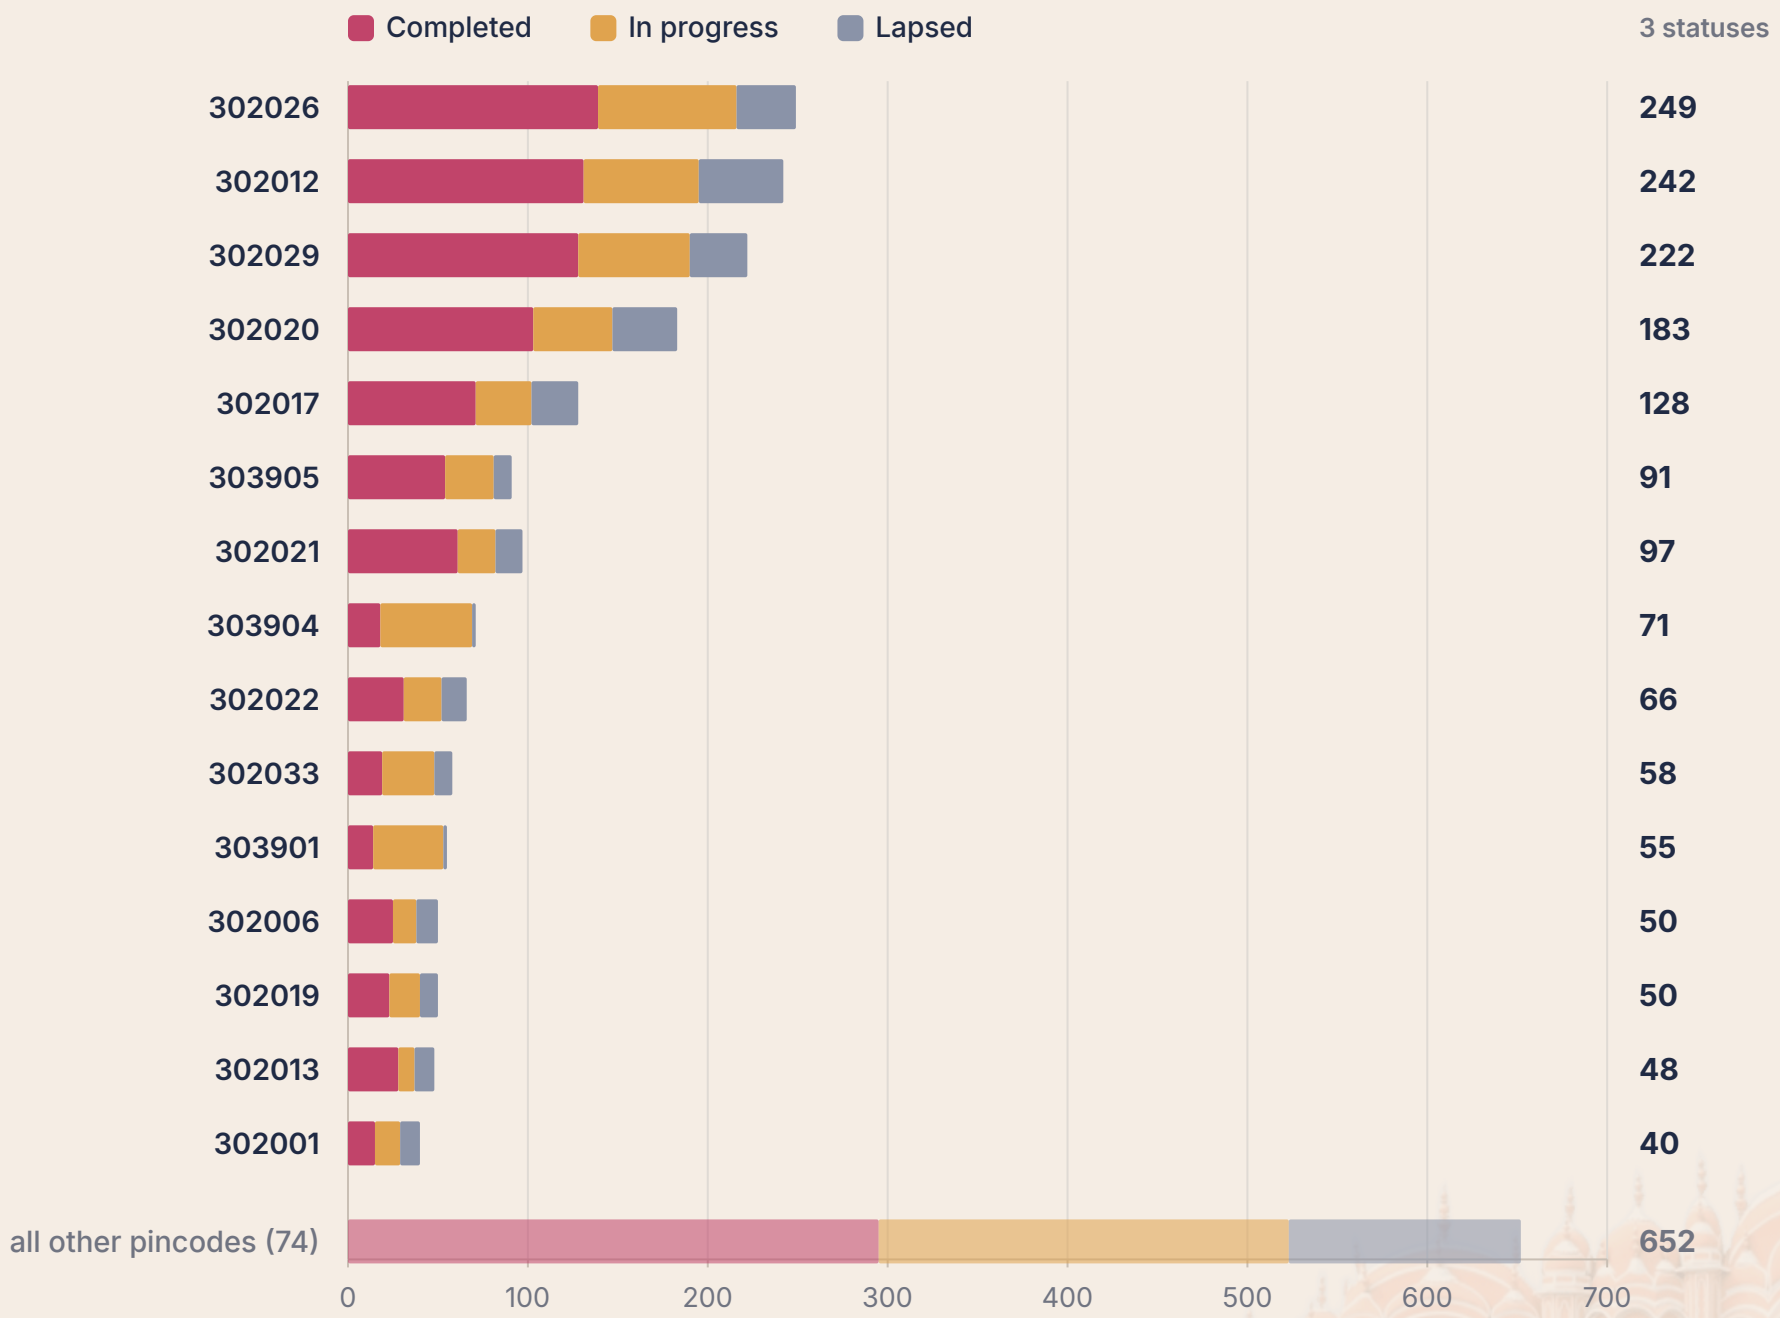

Project-type mix by pincode. Each bar is that pincode's projects split by type, nose to tail from zero; the figure at the right is the row's total.

The same fifteen pincodes carry, between them, **945** Group Housing, **693** Plotted, **43** Commercial and **28** Mixed projects.

What the portal records, pincode by pincode

Each bar is a pincode's **completed**, **in-progress** and **lapsed** projects. Those three statuses cover **2,302** of the 2,389 projects; the remaining **87** carry REVOKED, SUSPENDED or EXEMPTED and are not shown.

Recorded status by pincode, for the three statuses shown. Each bar is that pincode's completed, in-progress and lapsed projects, nose to tail from zero; the figure at the right is those three added together.

THE FIGURES ALREADY SHOWN, IN ONE PLACE

Jaipur's register holds **2,389** projects declaring **328,469** units. **1,155** are recorded as completed (**48%**), **747** are in progress, and **421** sit on the portal's Lapsed list — against **400** whose recorded status is LAPSED, which is the count the chart above uses. **460** projects hold at least one extension — **880** records, a median of **364 days**. The top ten pincodes hold **61%** of the projects, and **53** pincode rows hold fewer than ten.
